

PERIYAR UNIVERSITY PERIYAR PALKALAI NAGAR SALEM-636 011

DEGREE OF BACHOLAR OF MATHEMATICS CHOICE BASED CREDIT SYSTEM

Syllabus for B.Sc., MATHEMATICS

(SEMESTER PATTERN) (For Candidates Admitted in the Colleges Affiliated to Periyar University from 2023-2024 onwards)

NEW INITIATIVE IN MODERNISING

UNDER-GRADUATE PROGRAMME IN MATHEMATICS

CONTENTS

- 1. Introduction
- 2. Highlights of the Revamped Curriculum
- **3.** Value additions in the Revamped Curriculum
- 4. Credit Distribution for UG Programme in Mathematics
- 5. Consolidated Semester wise and Component wise Credit distribution
- 6. B. Sc Mathematics Curriculum Design

1. Introduction

B.Sc. Mathematics : Programme Outcome, Programme Specific Outcome and Course Outcome

Mathematics is the study of quantity, structure, space and change, focusing on problem solving, with wider scope of application in science, engineering, technology, social sciences etc. The key core areas of study in Mathematics include Algebra, Analysis (Real & Complex), Differential Equations, Geometry, and Mechanics. The Bachelor's Degree B.Sc. Mathematics is awarded to the students on the basis of knowledge, understanding, skills, attitudes, values and academic achievements expected to be acquired by learners at the end of the Programme. Learning outcomes of Mathematics are aimed at facilitating the learners to acquire these attributes, keeping in view of their preferences and aspirations for gaining knowledge of Mathematics.

Bachelor's degree in Mathematics is the culmination of in-depth knowledge of algebra, calculus, geometry, differential equations and several other branches of Mathematics. This also leads to study of related areas like Computer science, Financial Mathematics, Statistics and many more. Thus, this programme helps learners in building a solid foundation for higher studies in Mathematics. The skills and knowledge gained have intrinsic aesthetics leading to proficiency in analytical reasoning. This can be utilised in Mathematical modelling and solving real life problems.

Students completing this programme will be able to present Mathematics clearly and precisely, make abstract ideas precise by formulating them in the language of Mathematics, describe Mathematical ideas from multiple perspectives and explain fundamental concepts of Mathematics to non-Mathematicians.

Completion of this programme will also enable the learners to join teaching profession, enhance their employability for government jobs, jobs in banking, insurance and investment sectors, data analyst jobs and jobs in various other public and private enterprises.

Under Graduate Programme

Programme Outcomes:

PO1: Disciplinary Knowledge: Capable of demonstrating comprehensive knowledge and understanding of one or more disciplines that form a part of an undergraduate programme of study.

PO2: Critical Thinking: Capability to apply analytic thought to a body of knowledge; analyze and evaluate evidence, arguments, claims, beliefs on the basis of empirical evidence; identify relevant assumptions or implications; formulate coherent arguments; critically evaluate practices, policies and theories by following scientific approach to knowledge development.

PO3: Problem Solving: Capacity to extrapolate from what one has learned and apply their competencies to solve different kinds of non-familiar problems, rather than replicate curriculum content knowledge; and apply one's earning to real life situations.

PO4: Analytical Reasoning: Ability to evaluate the reliability and relevance of evidence; identify logical flaws and holes in the arguments of others; analyze and synthesize data from a variety of sources; draw valid conclusions and support them with evidence and examples and addressing opposing viewpoints.

PO5: Scientific Reasoning: Ability to analyse, interpret and draw conclusions from quantitative / qualitative data; and critically evaluate ideas, evidence, and experiences from an open minded and reasoned perspective.

PO6: Self-directed & Lifelong Learning: Ability to work independently, identify and manage a project. Ability to acquire knowledge and skills, including "learning how to learn", through self-placed and self-directed learning aimed at personal development, meeting economic, social and cultural objectives.

B. Sc Mathematics

Programme Specific Outcomes:

PSO1: Acquire good knowledge and understanding, to solve specific theoretical & applied problems in different area of mathematics & statistics.

PSO2: Understand, formulate, develop mathematical arguments, logically and use quantitative models to address issues arising in social sciences, business and other context /fields.

PSO3: To prepare the students who will demonstrate respectful engagement with other's ideas, behaviors, beliefs and apply diverse frames of references to decisions and actions. To create effective entrepreneurs by enhancing their critical thinking, problem solving, decision making and leadership skill that will facilitate startups and high potential organizations.

Mapping of Course Learning Outcomes (CLOs) with Programme Outcomes (POs) and Programme Specific Outcomes (PSOs)can be carried out accordingly, assigning the appropriate level in the grids:

	POs				PSC	Os			
	1	2	3	4	5	6	 1	2	
CLO1									
CLO2									
CLO3									
CLO4									
CLO5									

2. Highlights of the Revamped Curriculum:

- Student-centric, meeting the demands of industry & society, incorporating industrial components, hands-on training, skill enhancement modules, industrial project, project with viva-voce, exposure to entrepreneurial skills, training for competitive examinations, sustaining the quality of the core components and incorporating application oriented content wherever required.
- The Core subjects include latest developments in the education and scientific front, advanced programming packages allied with the discipline topics, practical training, devising mathematical models and algorithms for providing solutions to industry / real life situations. The curriculum also facilitates peer learning with advanced mathematical topics in the final semester, catering to the needs of stakeholders with research aptitude.
- The General Studies and Mathematics based problem solving skills are included as mandatory components in the 'Training for Competitive Examinations' course at the final semester, a first of its kind.
- The curriculum is designed so as to strengthen the Industry-Academia interface and provide more job opportunities for the students.
- The Industrial Statistics course is newly introduced in the fourth semester, to expose the students to real life problems and train the students on designing a mathematical model to provide solutions to the industrial problems.
- The Internship during the second-year vacation will help the students gain valuable work experience that connects classroom knowledge to real world experience and to narrow down and focus on the career path.
- Project with viva-voce component in the fifth semester enables the student, application of conceptual knowledge to practical situations. The state of art technologies in conducting a Explain in a scientific and systematic way and arriving at a precise solution is ensured. Such innovative provisions of the industrial training, project and internships will give students an edge over the counterparts in the job market.
- State-of Art techniques from the streams of multi-disciplinary, cross disciplinary and inter disciplinary nature are incorporated as Elective courses, covering conventional topics to the latest -Artificial Intelligence.

Semester	Newly introduced	Outcome / Benefits
	Components	
Ι	Foundation Course	• Instil confidence among students
	To ease the transition of	• Create interest for the subject
	learning from higher	
	secondary to higher	
	education, providing an	
	overview of the	
	pedagogy of learning	
	abstract Mathematics and	
	simulating mathematical	
	concepts to real world.	
I, II, III,	Skill Enhancement	Industry ready graduates
IV	papers (Discipline	Skilled human resource
	centric / Generic /	• Students are equipped with essential skills to make
	Entrepreneurial)	them employable
		• Training on Computing / Computational skills
		enable the students gain knowledge and exposure
		on latest computational aspects
		• Data analytical skills will enable students gain
		internships, apprenticeships, field work involving
		data collection, compilation, analysis etc.
		• Entrepreneurial skill training will provide an
		opportunity for independent livelihood
		• Generates self – employment
		Create small scale entrepreneurs
		• Training to girls leads to women empowerment
		• Discipline centric skill will improve the Technical
		knowhow of solving real life problems using ICT
		tools
III, IV, V	Elective papers-	• Strengthening the domain knowledge
& VI	An open choice of topics	• Introducing the stakeholders to the State-of Art
	categorized under	techniques from the streams of multi-disciplinary.
	Generic and Discipline	cross disciplinary and inter disciplinary nature
	Centric	• Students are exposed to Latest topics on Computer
		Science / IT, that require strong mathematical
		background
		• Emerging topics in higher education / industry /
		communication network / health sector etc. are
		introduced with hands-on-training. facilitates
		designing of mathematical models in the respective
	l	

			sectors
IV	Industrial Statistics	•	Exposure to industry moulds students into solution providers
		•	Generates Industry ready graduates
		•	Employment opportunities enhanced
II year	Internship / Industrial	•	Practical training at the Industry/ Banking Sector /
Vacation	Training		Private/ Public sector organizations / Educational
activity			institutions, enable the students gain professional experience and also become responsible citizens.
V	Project with Viva – voce	•	Self-learning is enhanced
Semester		•	Application of the concept to real situation is conceived resulting in tangible outcome
VI	Introduction of	٠	Curriculum design accommodates all category of
Semester	Professional Competency component	•	learners; 'Mathematics for Advanced Explain' component will comprise of advanced topics in Mathematics and allied fields, for those in the peer group / aspiring researchers; 'Training for Competitive Examinations' –caters to the needs of the aspirants towards most sought - after services of the nation viz, UPSC, CDS, NDA, Banking Services, CAT, TNPSC group services, etc.
Extra Cred	lits:	•	To cater to the needs of peer learners / research
For Advar	ced Learners / Honours		aspirants

QUESTION PAPER PATTERN FOR UG

EXAMINATION SYSTEM

There are two components in the evaluation and assessment of a student, namely Continuous Internal Assessment (CIA) and Semester Examination (SE). The CIA will take place during the course of the semester and the semester Examination shall be conducted at the end of each semester. Each UG course consists of six semesters.

SEMESTER EXAMINATION QUESTION PAPER PATTERN FOR THE THEORY PAPERS

The Maximum Marks for Semester Examination is 75 for UG.

The question paper shall have three Parts with the maximum of 75 marks for three hours with the following break-up.

Part-A

Part-A shall contain *fifteen* Multiple Choice Questions drawn from all the units on the basis of three questions from each unit.

Each question shall carry one mark ($15 \times 1=15$ Marks). Answer all the questions.

Part-B

Part-B shall contain *five* questions drawn one each from the 5 units.

2 questions out of 5 are to be answered. Each question shall carry five marks ($2 \times 5=10$ Marks). Answer any two questions.

Part-C

Part-C shall contain *five* "EITHER OR" type questions drawn from all the 5 units. One "EITHER OR" type question from each unit.

Each question shall carry 10 marks ($5 \times 10=50$ Marks). Answer all the questions.

CONTINUOUS INTERNAL ASSESSMENT (CIA)

The break-up of the internal marks components is as follows:

- (i) CIA Tests 15 Marks
- (ii) Attendance 5 Marks
- (iii) Problem Solving/Assignment 5 Marks

MARKS AND QUESTION PAPER PATTERN FOR PRACTICALS

The Maximum Marks for Practical Examination is 100 for UG.

External Mark Components 60 Marks. Practical Examination 45 Marks and Record 15 Marks. Internal Mark 40 Marks.

QIESTION PATTERN FOR THE PRACTICAL EXAM PAPERS

Answer any THREE questions out of 5 questions $(3 \times 15=45 \text{Marks})$.

PASSING MINIMUM

The candidate shall be declared to have passed the examination if the candidates secure not less than 30 marks out of 75 marks in the semester examination in each theory course and in total (CIA mark + Theory Exam mark) not less than 40 marks.

The candidates shall be declared to have passed the examination if he/she secures not less than 40 marks in total (CIA mark + Practical Exam mark) with minimum of 18 marks out of 45 marks in the Practical Exam conducted by the University. There is no passing minimum for the record notebook. However, submission of the record notebook is necessary. Candidate who does not obtain the required minimum marks for a pass in a Course/Practical shall be declared Re-Appear (RA) and the candidate has to appear and pass the same at a subsequent appearance.

Course Learning Outcome

After completion of this course successfully, the students will be able to

CLO1: Prove the binomial theorem and apply it to find the expansions of any $(x + y)^n$ and also, solve the related problems

CLO2: Find the various sequences and series and solve the problems related to them. Explain the principle of counting.

CLO3:Find the number of permutations and combinations in different cases. Apply the principle of counting to solve the problems on permutations and combinations

CLO4: Explain various trigonometric ratios and find them for different angles, including sum of the angles, multiple and submultiple angles, etc. Also, they can solve the problems using the transformations.

CLO5: Find the limit and derivative of a function at a point, the definite and indefinite integral of a function. Find the points of min/max of a function.

Course Learning Outcome (for Mapping with POs and PSOs)

Students will be able to

CLO 1: Find the nth derivative, form equations involving derivatives and apply Leibnitz formula

CLO 2: Find the partial derivative and total derivative coefficient

CLO 3: Determine maxima and minima of functions of two variables and to use the Lagrange's method of undetermined multipliers

CLO 4: Find the envelope of a given family of curves

CLO 5: Find the evolutes and involutes and to find the radius of curvature using polar coordinates

Website and e-Learning Source	https://nptel.ac.in

Students will be able to

CLO 1: Explain in detail about sets and functions, equivalence and countability and the LUB axiom

CLO 2: Explain Sequence and Subsequence of real numbers and to find the limit of sequence to test for convergent, divergent, bounded and monotone sequences

CLO 3: Explain the operations on convergent and divergent sequences and to Explain the concepts of limit superior and limit inferior and the notion of Cauchy sequences

CLO 4: Classify the series of real numbers and the alternating series and their convergence and divergence, the conditional convergence and absolute convergence and solve problems on convergence of the sequences

CLO 5: Explain about the metric spaces a	nd functions continuous on a Metric space

Students will be able to

CLO 1: Explain about analytic functions, their differentiation and continuity and to verify the Harmonic functions using analyticity conditions

CLO 2: Explain the concept of Conformal mappings and mappings by linear transformations and linear fractional transformations

CLO 3: Explain about the integrations of functions over simply and multiply connected domains and to derive the Cauchy integral formula, Liouvlle's theorem, Fundamental theorem of Algebra and Maximum Module Principle

CLO 4: Find the convergence the sequences and series, to derive Taylor's and Laurent's series **CLO 5:** Find the nature of singularities, to find the residue of a given function at a given singular point, to Explain about zeros and poles and to evaluate real improper integrals (Excluding poles on the real axis)

Students will able to

CLO 1: Define Resultant, Component of a Force, Coplanar forces, like and unlike parallel forces, Equilibrium of a Particle, Limiting equilibrium of a particle on an inclined plane.

CLO 2: Define Moment of a force and Couple with examples. Define Parallel Forces and Forces acting along a Triangle, Solve problems on frictional forces

CLO 3: Define work, energy, power, rectilinear motions under varying forces. Define Simple Harmonic Motion and find its Geometrical representation.

CLO 4: Define Projectile, impulse, impact and laws of impact. Prove that the path of a projectile is a parabola. Find the direct and oblique impact of smooth elastic spheres

CLO 5: Define central orbits, explain conic as centered orbits and solve problems related to central orbits

Question Paper Pattern: 75 Objective type questions each carrying 1 Mark.

Course Learning Outcome (for Mapping with POs and PSOs)

Students will be able to

CLO 1 : Perform basic mathematics in Numbers.

CLO 2: Understand Decimal Fractions and Simplification.

CLO 3 : Develop basic concept of Square Roots and Cube Roots and Average.

CLO 4 : Explain Problems on Numbers - Problems on Ages.

CLO 5 : Critique and evaluate quantitative arguments that utilize mathematics, statistical and

quantitative informations.

Course Outcomes (COs)

On successful completion of the course, the students will be able to

- **CLO 1 :** Describe the roots of algebraic equations using different methods like, Newton-Raphson method, Secant Method etc.
- CLO 2 : Solve system of algebraic equations using direct and iterative methods.
- **CLO 3 :** To write C++ Program to compute roots of algebraic equations using Bisection method, Newton-Raphson method etc.
- **CLO 4 :** To write C++ Program to compute roots of algebraic equations using Secant method, Gauss Jordan method etc.
- **CLO 5 :** To write C++ Program to solve the system of algebraic equations using the Jacobian method, Gauss Seidal method.

Course Outcomes (COs)

On successful completion of the course, the students will be able to

CLO 1 : Understand the usage of R Software and able to handle basic data types of R.

CLO 2 : Create data, find the missing values, converting data types.

CLO 3 : Apply the control structures, numerical and statistical functions.

CLO 4 : To import files, able to connect with a data base and handle Pie and Bar Charts.

CLO 5 : Compute mean, median, mode and skewness using R.

Students will able to

CLO 1: Find the roots of a polynomial equation. Find one of the most commonly used techniques for finding the roots of given equations.

CLO 2: Define for solving differential equations by approximating derivatives with finite differences. To solve the problems using forward and backward formulae.

CLO 3: To determine the functions values even when the parameters are not evenly spaces. In this chapter is used to calculate the values of the independent variable X that corresponds to a given function values.

CLO 4: To find involves the computation of a derivative of a function f from given values of f. To find how to use the Simphson 1/3 and 3/8 formulae for solving the problems.

CLO 5: To find techniques that attempt to find the exact or approximation solutions of non linear systems by applying a finite number of operations, such as matrix factorization, elimination, or inversion.

Students will able to

CLO 1: To find mathematical logic statement and notations.

CLO 2: To find the decision problem of finding whether a given statement is tatutology or contradiction or satisfiable in a finite number of steps.

CLO 3: To find the predicate logic. To find the theory of inference for the Predicate calculus.

CLO 4: Define Relations and Ordering. Define types of functions and natural numbers.

CLO 5: Define Definition and properties of Lattice. To solve Boolean Algebra.

Course Learning Outcome (for Mapping with POs and PSOs)

Students will be able to

CLO 1: Formulate and solve real life problems through L.P.P.

CLO 2: Compute the optimum Transportation schedule.

CLO 3: Find the optimum Assignment model.

CLO 4: Solve Sequencing problems.

CLO5 : Use the techniques for planning and scheduling of projects.

		equation	ns.							
<u> </u>		Comput	e nur	nerica	l solutions	of integrati	on pro	blem	s and ODE.	
Course Outline		UNIT-I: IN	NTEF	RPOL	ATION					
		Newton's Forward and Backward formulae for Interpolation- Central difference formulae-Gauss Forward, Gauss Backward, Stirling's and Bessel's formulae-Simple Problems only. (Derivations of Formulae								
		and Proof of theorems are excluded)								
		(Chapter 6: Section 6, Chapter 7: Section 7 to 7.6)								
		UNIT-II: INTERPOLATION WITH UNEQUAL INTERVALS								
		Lagrange's Formula for Interpolation – Newton's Divided Differences formula. Lagrange's inverse interpolation -Simple Problems only. (Derivations of Formulae and Proof of theorems are excluded)								
		(Chapter 6: Section 8.5 to 8.8)								
		UNIT-III : SOLUTION OF ALGEBRAIC AND								
		TRANSCEDENTAL EQUATIONS								
		Numerical solutions of polynomial and Transcendental equations in one variable. Bi-Section Method –Method of false position (Regular Falsi Method) - Method of Iteration - Newton Raphson Method (Derivations of the formulae are excluded)								
		(Chapter 3:	Secti	on 3.	l to 3.4)					

	UNIT-IV: NUMERICAL INTEGRATION					
	Quadrature Formula for equidistant ordinates based on Newton's Forward formula – Trapezoidal rule – Simpson's one third rule – Simpson's Three Eighth rule - Simple Problems only.(Derivations of Formulae are excluded)					
	(Chapter 9: Section 9.7 to 9.9, 9.13, 9.14)					
	UNIT-V: Numerical solution of ordinary differential equation (first order only), Euler's method - Modified Euler's method- Picard's method of successive approximation.Runge-Kutta method fourth order only					
	(Chapter 11: Section 11, 11.8, 11.9, 11.11, 11.12)					
Skills acquired	Knowledge, Problem Solving, Analytical ability, Professional					
from this course	Competency, Professional Communication and Transferrable Skill					
Recommended	1.P. Kandasamy & K. Thilagavathy, K.Gunavathi, Numerical Methods,

METHOD OF EVALUATION:

Continuous Internal Assessment	End Semester Examination	Total
25	75	100

Course Learning Outcome (for Mapping with POs and PSOs)

Students will be able to

- **CLO 1:** Applying the Methods of interpolation to compute the missing value in real life problems.
- **CLO 2:** Compute the missing values for unequal intervals using Divided differences and Lagrange Method
- **CLO 3:** Apply Numerical Methods to evaluate numerical solution of algebraic and transcendental equations..

- CLO 4: Compute definite integral for different combinations of integrands using various methods and analyze their accuracy.
- CLO 5: Evaluate the solution of first order differential equation using Euler, Picard's and Runge - Kutta Methods.

			P		PSOs				
	1	2	3	4	5	6	1	2	3
CL01	3	2	2	1	2	1	3	2	1

METHOD OF EVALUATION

Continuous Internal Assessment	End Semester Examination	Total
25	75	100

Course Learning Outcome (for Mapping with POs and PSOs)

Students will be able to

CLO 1: Apply binomial, Poisson and normal distribution properties to solve real life problems.

CLO 2: Study the relationship between two or more variables.

CLO 3: Understand the uses of Large Samples.

CLO 4: Apply the concept of small sample test to solve real life problems.

CLO 5: Apply and examine chi-square test and analyse the principles of designs of experiments to yield valid conclusions.

			PSOs
